VV DN 10÷50

PVC-U

Angle seat valve

VV DN 10÷50

The VV angle seat valve is a shutting-off and regulating valve particularly suitable for clean fluids.

ANGLE SEAT VALVE

- Connection system for solvent weld, threaded and flanged joints
- Can be installed in any position
- **No metal parts in contact with the fluid**
- **Valve material compatibility** (PVC-U) with water, drinking water and other food substance conveyance according to **current regulations**
- Can be maintained with the valve body installed

Technical specifications	
Construction	Angle seat shutting-off and regulating valve
Size range	DN 10 ÷ 50
Nominal pressure	DN 10÷25: PN 16 with water at 20 °C DN 32÷50: PN 10 with water at 20 °C
Temperature range	0 °C ÷ 60 °C
Coupling standards	Solvent welding: EN ISO 1452, EN ISO 15493, BS 4346-1, DIN 8063, NF T54-028, ASTM D 2467, JIS K 6743. Can be coupled to pipes according to EN ISO 1452, EN ISO 15493, DIN 8062, NF T54-016, ASTM D 1785, JIS K 6741. Thread: ISO 228-1, DIN 2999, ASTM D 2467, JIS B 0203. Flanging system: ISO 7005-1, EN ISO 1452, EN ISO 15493, EN 558-1 (DN 10÷50) , DIN 2501, ANSI B.16.5 cl. 150, JIS B 2220.
Reference standards	Construction criteria: EN ISO 1452, EN ISO 15493 Test methods and requirements: ISO 9393 Installation criteria: DVS 2204, DVS 2221, UNI 11242
Valve material	PVC-U
Seal material	EPDM+PE (EPDM+PTFE or FKM+PTFE on request)
Control options	Manual control

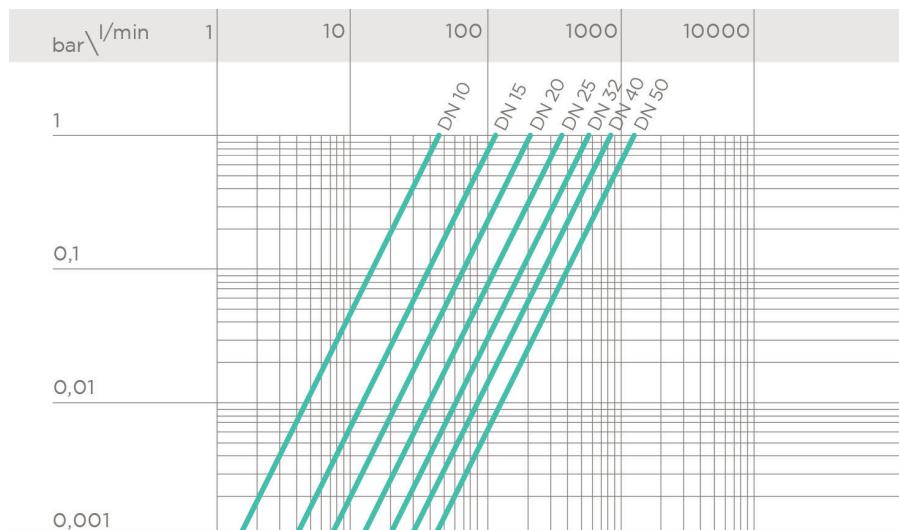

TECHNICAL DATA

PRESSURE VARIATION ACCORDING TO TEMPERATURE

For water and non-hazardous fluids with regard to which the material is classified as CHEMICALLY RESISTANT. In other cases, a reduction of the nominal pressure PN is required (25 years with safety factor).

PRESSURE DROP GRAPH

K_v100 FLOW COEFFICIENT

The K_v100 flow coefficient is the Q flow rate of litres per minute of water at a temperature of 20°C that will generate Δp= 1 bar pressure drop at a certain valve position. The Kv100 values shown in the table are calculated with the valve completely open.

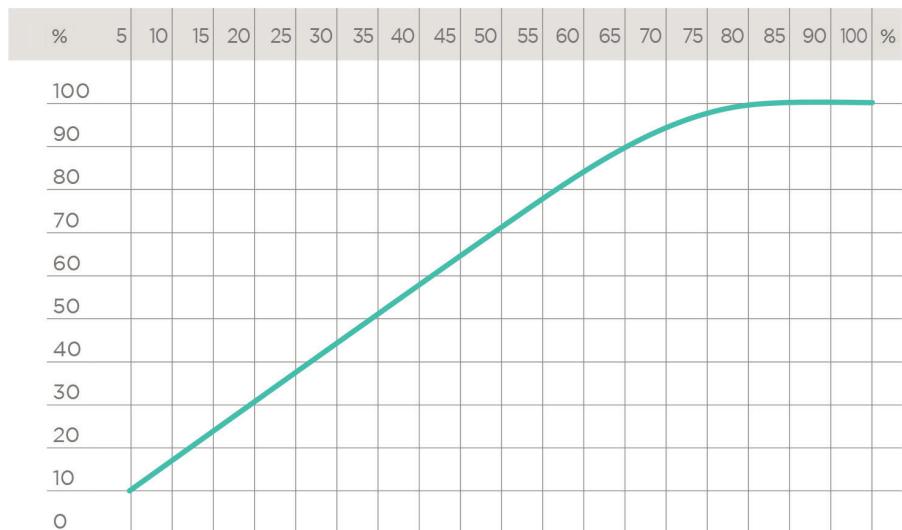

DN	10	15	20	25	32	40	50
Kv100 l/min	47	110	205	375	560	835	1300

RELATIVE FLOW COEFFICIENT GRAPH

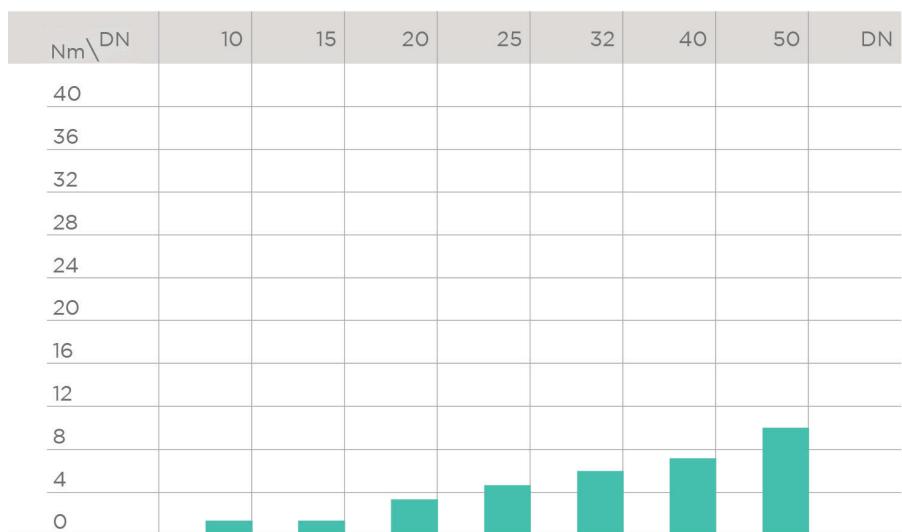

The relative flow coefficient is the flow rate through the valve as a function of the degree of valve opening.

Horizontal axis: Percentage opening of the valve

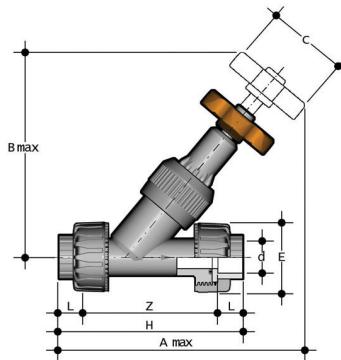

Vertical axis: Relative flow coefficient

OPERATING TORQUE AT MAXIMUM WORKING PRESSURE

* Spare parts

The material of the component and the quantity supplied are indicated between brackets

DISASSEMBLY

- 1) Isolate the valve from the fluid flow.
- 2) Unscrew the union nut (2) anticlockwise and then remove the internal assembly, complete with all its components, from the body (6).
- 3) Remove the locking clip (5) and shutter (7).
- 4) Remove the gland (12).
- 5) Unscrew the nut (9) remove the handwheel (1) and union nut (2).
- 6) Rotate the stem (8) clockwise and remove it completely from the bonnet (10). At this point it is possible to access the gland packing (4), the bottom sleeve (11) and the O-Ring (3) which be easily removed.

ASSEMBLY

- 1) Insert the stem (8) in the bonnet (10) and screw anticlockwise.
- 2) Insert in order: O-Ring, (3) bottom sleeve (11) and gland packing (4).
- 3) Place the union nut (2) on the stem, screw on the handwheel (1) and nut (9).
- 4) Insert the gland (12) and shutter (7) on the stem (8), insert the locking clip (5) in its housing.
- 5) Insert the completed assembly in the body, making sure that the locating tab on the bonnet sits in its housing in the body
- 6) Lock the union nut.

Note: maintenance operations can be carried out with the valve body installed. During assembly operations, it is advisable to lubricate the rubber seals. Mineral oils are not recommended for this task as they react aggressively with EPDM rubber.

INSTALLATION

- 1) Install the valve such that the arrow stamped on the body indicates the direction of fluid flow
- 2) If the valve is installed in a vertical position, if the connection is solvent welded, make sure that the solvent does not enter inside the body, as this would damage the seating of the seal.
- 3) Before putting the valve into service, check the tightness of the union nut (2).

WARNINGS

Do not used compressed air or other gases to test thermoplastic lines.
Always avoid sudden closing manoeuvres and protect the valve from accidental manoeuvres.
